✓ --The various features of novelty which characterize the invention are pointed out with particularity in the claims annexed to and forming a part of the disclosure. For a better understanding of the invention, its operating advantages, and specific objects attained by its use, reference should be had to the drawing and descriptive matter in which there are illustrated and described preferred embodiments of the invention.

#### Brief Description of the Drawings

Figure 1 shows a cross-section through a gasification reactor pursuant to the present invention; and

Figure 2 shows an enlarged segment of the gasification reactor of Figure 1.

Detailed Description of the Preferred Embodiments--.

In the Claims:

✓ Please cancel claims 1-5, and add the following new claims:

a8 ✓ --6. An appliance for gasification of carbon- and ash-containing fuel, residual and waste materials using an oxygen-containing oxidizing agent at temperatures above a melting point of inorganic fractions and at pressures between atmospheric pressure and 80 bar, comprising a reaction chamber designed as an entrained-bed reactor, the reaction chamber having a contour delimited by a cooled reactor wall of the following structure, from the outside inward:
